# Company Profile

*Capp Plast at the forefront of quality, technology and expertise.*

Capp Plast's history began in **1960** and today it is one of the most important and dynamic national and European companies operating in the field of plastics processing for the production of large containers, bottles and flexible packaging. The three-Division structure has ensured, at different extents, constant development over time in terms of turnover, production volumes and technical-quality know-how.

**Bottle Division** through numerous extrusion-blowing and other ancillary processes is able to produce **more than 150 million bottles annually** for a wide variety of product groups. Thanks to increasing research and development, it is among the most dynamic and flexible providers of new solutions in the packaging market.

**Container and Pallet Division** meets the necessity of agriculture and industry. The company's "core business" offers its customers innovative solutions in the field of goods handling, warehousing and storage. Equipped with a complete fleet of presses (ranging from 900 to 5500 tonnes of power), it guarantees maximum flexibility with respect to the needs of the Agro-Industrial market. Its production of **500.000 containers per year** containers per year puts it in a leading position in Europe.

**Flexible Packaging Division (Film)** - More than half a century's experience has enabled this division to develop and design a complete range of products that fully meet customers' industrial and commercial process requirements.

Capalle - Florence, Factory

# Quality and Technology

nr. 468/A

**THE QUALITY SYSTEM** has been certified since 1996 according to **UNI EN ISO 9001:2015** with certificate **No. 468-A**.

The aim is to satisfy the customer by providing clear, meaningful and high value-added supply specifications and/or projects that are used within one's own organisation as a compass towards Total Quality and the improvement of manufactured products.

**Capp Plast**, has long complemented its production activities with a set of researches carried out in the laboratory by **qualified and specialised personnel**. Careful tests are carried out on incoming raw materials, and in particular, the melt index is checked against that stated in the supplier's documents.

During the production phase, inspections are carried out with sampling on board the machine and with performance tests of the finished product by means of automated equipment, dynamometers, pressure-tension-compression tests, etc. All production undergoes continuous supervision.

**For food industry products** a traceability system in accordance with **Regulation 1935/2004 EC**, is in place, procedures and work plans in accordance with **GMP** standards (**dir 2023/2006 EC**), are applied, and products comply with **Regulation 10/2011 EC** and **DM 21/03/73** and subsequent updates.

# Our values

## Ethical Standards

**Honesty, fairness and transparency in relations with all the various stakeholders:** in relations with suppliers and customers, it undertakes to act fairly, avoiding misleading information and behaviour that could induce undue benefits.

## Human Value

**Respect for the individual** has always been the company's policy towards its employees, regardless of their position in society and the company organisation.

**Ensure equal opportunities for the protection and enhancement of human resources by considering them as an indispensable asset of the company.**

Capp Plast has always promoted inclusive activities and the protection of populations as a chance for rehabilitation.

Sofidel Suppliers Sustainability Award 2021

In 2021 Capp Plast was awarded the **3SAward**

The **Sofidel Suppliers Sustainability Award (3SAward)** was created to incentivise, disseminate and enhance best practices and improvement actions implemented by suppliers in the field of environmental and social sustainability.

# Plastic material Recovery

Since 1998, Capp Plast has been equipped with a pioneering **plant for the recovery and regeneration of production waste and scraps** as well as end-of-life plastic products (PE/PP) from customers, suppliers and municipal utilities, the regeneration of which reintroduces them into particular parts of the production cycle.

This recovery process was authorised by the Italian Authorities.

Since 1998 Capp Plast has been a member of Conai (Cons. Naz. Imballaggi) in accordance with T.U.A. L.D. 152/2006 (ex L.D. 22/97) and since 1999 at Polieco.

**REuse | REduce | REcycle**

**THE LIGHTWEIGHT PLASTIC  
EVEN FOR THE ENVIRONMENT**

# Respect for the Environment

Capp Plast has always been oriented towards the containment and **reduction of the environmental impact of its production activities**, through the recovery of plastic materials, their valorisation, and reuse, with a **“Sustainability in Action”** path aimed at promoting information and ideas from a circular economy perspective.

The group's commitment has always been characterised by courageous ecological initiatives that have seen it strive to make decisions that ensure complete respect for the environment and the protection of its workers. For example: not transforming PVC, using lead- and chrome-free inks (food series), not incorporating materials other than polyethylene (wood, iron, etc.) in the accessories and walls of the containers to better guarantee their recovery and recycling, have made it possible to reduce the environmental impact and to position ourselves in a position of excellence with respect to a modern and effective national ecological policy.

Choices in favour of ecology, made even with sacrifices and renunciations, have increasingly met with the approval of customers, influencing them to make more and more environmentally friendly choices. Counting ecologically sensitive organisations such as Capp Plast in its supplier base therefore ensures a high added value response to the changing needs of the large European market in terms of ecology and the environment.

**All production activities generate neither waste nor scrap: since they recycle, or immediately during the production process, or further regenerate and reuse all the resulting materials from the various processes.**

**All blowing machines are equipped with scraps and waste grinding machines for immediate recovery of these in the production from which they are generated. Three grinding and regeneration plants enable the recovery of scrap and waste from the Film Division and the Container and Pallet Division.**

The Group also offers, directly to its customers, a take-back and recycling service for all used polyethylene containers. Capp Plast enables the recycling of old containers by replacing them with new ones through its own factory. The materials obtained from the Regeneration Division are used to make components or accessories to be assembled to the large containers of the Injection Division.
